EXAMINER

LAVARIAS, ARNEL C

ART UNIT

PAPER NUMBER

2872

DATE MAILED: 10/12/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/661,254

Applicant(s)

MOON ET AL.

Examiner

Arnel C. Lavarias

Art Unit

2872

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 9/20/04, 6/22/04, 6/7/04, 3/4/04, 9/12/03.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 21-77 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 21-77 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 3/4/04, 9/12/03 is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

1. The cancellation of Claims 1-20 in the submission dated 9/20/04 is acknowledged and accepted.
2. The addition of Claims 21-77 in the submission dated 9/20/04 is acknowledged and accepted.

Priority

3. Applicant has not complied with one or more conditions for receiving the benefit of an earlier filing date under 35 U.S.C. 120 as follows:

An application in which the benefits of an earlier application are desired must contain *a specific reference to the prior application(s) in the first sentence of the specification or in an application data sheet (37 CFR 1.78(a)(2) and (a)(5))*. The specific reference to any prior nonprovisional application must include the relationship (i.e., continuation, divisional, or continuation-in-part) between the applications except when the reference is to a prior application of a CPA assigned the same application number.

Information Disclosure Statement

4. With respect to the information disclosure statement filed 6/22/04, citations on Pages 2-4 were lined through since there were previously cited in the information disclosure

Art Unit: 2872

statement filed 6/7/04. Additionally, the foreign patent document 9715690, dated 5/1997, was lined through since no copy of such a document was submitted. Finally, the citation on Page 5 was lined through since that citation was improperly listed (i.e. publication number and associated identifiers do not match).

Drawings

5. The drawings were received on 9/12/03 as part of the original submission of the disclosure of the instant application.
6. The formal drawings were received on 3/4/04. These drawings are objected to for the following reason(s) as set forth below.
7. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description:
Figure 4- Reference numeral 842
Figure 8- Reference numeral 89
Figure 10- Reference numeral 321
Figure 18- Reference numeral 630
Figure 28e- Reference numeral 576
Figure 31- Reference numeral 514.
8. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description:
Figure 5- Reference numeral 203
Figure 28- Reference numeral 560.

Art Unit: 2872

9. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

10. The abstract of the disclosure is objected to because of the following informalities:
Abstract, lines 3, 7, 9-10- an assay stick 7 and reaction vessel or tube 14 are neither shown or disclosed in the specification of the disclosure.
Correction is required. See MPEP § 608.01(b).
11. The disclosure is objected to because of the following informalities:
Page 1, lines 8-10, 13-14; Page 6, lines 7-9- appropriate publication serial numbers should be supplied
Page 1, line 25- 'and or chemical libraries' should read 'and/or chemical libraries.'
Page 4, line 3- after 'showing', 'an' should read 'a'
Page 9, line 10- 'recombines or re-pools' should read 'recombined or re-pooled'
Page 20, line 22- '705' should read '703'
Page 24, line 4- '452' should read '454'

Page 32, line 8- 'holy' should read 'holey'.

Appropriate correction is required.

Double Patenting

12. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

13. Claims 21-45 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over Claims 20-31, 40-41, 46-51, 53-69, 78-79, 84-89, 91-135 of copending Application No. 10/645686. Although the conflicting claims are not identical, they are not patentably distinct from each other because copending Application No. 10/645686 similarly recites an optical identification element having a synthesized chemical attached thereto, as set forth in Claims 21-45 of the instant application. Further, it is noted that 'a chemical' (See for example Claim 20 of copending Application No. 10/645686) would encompass those chemicals that are both synthetic and naturally occurring.

Art Unit: 2872

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

14. Claims 21-45 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over Claims 20-31, 40-41, 46-51, 53-69, 78-79, 84-89, 91-135 of copending Application No. 10/661031. Although the conflicting claims are not identical, they are not patentably distinct from each other because copending Application No. 10/661031 similarly recites an optical identification element having a synthesized chemical attached thereto, as set forth in Claims 21-45 of the instant application. Further, it is noted that 'a chemical' (See for example Claim 20 of copending Application No. 10/661031) would encompass those chemicals that are both synthetic and naturally occurring.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

15. Claims 21-44 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over Claims 24-60, 71-74 of copending Application No. 10/661082. Although the conflicting claims are not identical, they are not patentably distinct from each other because copending Application No. 10/661082 similarly recites an optical identification element having a synthesized chemical, as set forth in Claims 21-44 of the instant application. Further, it is noted that 1) the recited 'item' (See for example Claim 24 of copending Application No. 10/661082) generally corresponds to the synthesized chemical as recited in the instant application, and 2) it would have been readily apparent and obvious to one having

Art Unit: 2872

ordinary skill in the art that in attaching the synthesized chemical to at least a portion of the substrate, one may view either the synthesized chemical being disposed on the substrate, or conversely the substrate being disposed on the synthesized chemical.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

16. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

17. Claims 21-24, 32, 36, 38, 40, 42-43, 47, 54-56, 64, 68, 70, 72, 74-75 are rejected under 35 U.S.C. 102(b) as being anticipated by Grot et al. (U.S. Patent No. 6005691).

Grot et al. discloses an optical identification element (See Figures 3A, 3B, 5A, 5B) having a synthesized chemical (See 117 in Figure 3B; col. 4, line 48-col. 5, line 37; col. 7, line 50-col. 8, line 22) attached thereto and method for synthesizing a chemical on a substrate, the element and method both comprising a substrate (See 109 in Figure 3B); at least a portion of the substrate having at least one diffraction grating disposed therein (See 111 in Figure 3B), the grating having a resultant refractive index variation at a grating location (it is noted that features 111 appear as a variation of refractive index that alternates between the refractive index of substrate 109 and the refractive index of 117 when taken along a line parallel to the substrate surface, located in the plane of Figure

3B, and drawn bisecting the grating structure 111); and the grating providing an output optical signal indicative of a code (See 215, 221, 223 in Figure 5A; col. 8, line 23-col. 10, line 48) when illuminated by an incident light signal propagating in free space; and the synthesized chemical being attached to at least a portion of the substrate. Grot et al. additionally discloses the refractive index variation comprising at least one or more refractive index pitches superimposed at a grating location (See 111 in Figure 3B); the substrate being made of plastic (See col. 4, lines 32-47); the light source comprising one or more wavelengths (See col. 9, lines 59-65); the substrate having an end cross section geometry and a side view geometry that is rectangular (See Figure 3A); the substrate having a grating region where the grating is located and a non-grating region where the grating is not located at, and the substrate has a plurality of grating regions (See Figure 3A), the grating region having a refractive index not greater than that of the non-grating region (See col. 7, lines 50-57); the incident light being incident on the substrate at an angle to a longitudinal axis of the grating (See Figure 5A); the incident light comprising laser light (See col. 9, lines 59-65); and the substrate comprising a plurality of gratings each at different locations within the substrate (See Figure 3A).

18. Claims 21-28, 30, 32-45, 47-48, 50-52, 54-60, 62, 64-77 are rejected under 35

U.S.C. 102(b) as being anticipated by Frankel (U.S. Patent No. 6096496), of record.

Frankel discloses an optical identification element (See Figures 1, 8-15, 17) having a synthesized chemical attached thereto (See for example Figure 1B; Figure 19; col. 32, line 62-col. 34, line 22) and a method of synthesizing a chemical on a substrate, both the element and method comprising one or more substrates (See 190, 125, 160 in Figure 1A;

Figure 19) such as particles or beads; at least a portion of the substrate having at least one or more thin diffraction grating disposed therein (See for example 902a-f in Figure 9; 1003a-f in Figure 10; 1103a-f in Figure 11; 1204a-f in Figure 12; 1401a-e in Figure 14; 1506a-i in Figure 15) at different locations on the substrate, the grating having a resultant refractive index variation at a grating location (it is noted that features appear as a variation of refractive index that alternates between the refractive indices of the materials comprising the grating); and the grating providing an output optical signal indicative of a code (See 180 in Figure 1A; col. 11, line 44-col. 12, line 43) when illuminated by an incident light signal propagating in free space (See 170 in Figure 1A); and the synthesized chemical being attached to at least a portion of the substrate. Frankel additionally discloses at least one or more refractive index pitches superimposed at a grating location (See for example Figures 9-12, 14-15, 17); the substrate being made of glass (See col. 11, lines 27-43); the code comprising a plurality of digital bits, numbering for example 4 or 20 (See col. 11, line 44-col. 12, line 43), each bit having a plurality of states, each bit having a corresponding spatial location and having a value related to the intensity of the output signal at the spatial location of each bit (See also Figures 1A-B; 9-12, 15-15, 17); the incident light comprising at least one or more wavelengths (See col. 15, lines 6-12; col. 32, lines 4-21; col. 32, line 66-col. 33, line 25) from for example a laser; the dimensions of the bead, and hence the substrate being less than 2 mm (See col. 6, lines 65-67); the substrate having a reflective coating disposed thereon (See for example 904a-f in Figure 9); the substrate having a coating disposed on at least a portion of the substrate, at least a portion of the coating being made of a material, such as glass,

plastic or polymer, that allows sufficient amount of incident light to pass through the material to allow detection of the code (See for example 125, 125' in Figures 1A-B; col. 13, lines 36-53); the substrate having protruding sections (See for example Figures 9-12; 17); the substrate having an end and side view geometry that is circular or elliptical (See for example Figures 1A-B); a portion of the substrate having a 3-D shape of a cube with unequal sides or a sphere with nonuniform diameter (See for example 160, 190 in Figures 1A-B); the substrate having a grating region where the grating is located and a non-grating region where the grating is not located (See for example Figures 9-12; 14-15; 17); the substrate having a plurality of grating regions (See for example Figures 9-12; 14-15; 17); the grating region having a refractive index that is greater than that of the non-grating region (See for example Figures 14-15; col. 26, lines 44-67; in this particular case, the refractive index of 1501 near the grating 1506a-f is greater than the refractive index of a region in 1502b far away from the grating); the grating region having a refractive index that is not greater than that of the non-grating region (See for example Figures 14-15; col. 26, lines 44-67; in this particular case, the refractive index of 1501 near and away from the grating 1506a-f are the same); the incident light being incident on the substrate along a longitudinal axis of the grating or at an angle to the longitudinal axis of the grating (See Figures 1, 9-12, 14-15, 17); the chemical being for example an oligomer (See Figure 1B; col. 13, lines 7-53); the chemical having predetermined chemical components and comprising attaching predetermined ones of the components to corresponding predetermined one of the substrates in a predetermined order (See Figure 19; col. 32, line 62-col. 34, line 46); combining the substrates together in a common

container after each of the components are attached to the substrates (See Figure 19; col. 32, line 62-col. 34, line 46); and sorting the substrates by code after each of the components are attached to the substrates (See Figure 19; col. 32, line 62-col. 34, line 46).

Claim Rejections - 35 USC § 103

19. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

20. Claims 29, 31, 61, 63 are rejected under 35 U.S.C. 103(a) as being unpatentable over Frankel.

Frankel discloses the invention as set forth above in Claims 21 and 47, but does not specifically disclose the value of each bit corresponding to presence or absence of a corresponding refractive index pitch in the grating, and hence the value of each bit corresponding to the magnitude of refractive index variation of a corresponding refractive index pitch in the grating. However, Frankel does teach that the presence or absence of a particular spectral color determines whether a particular bit in the code has a '1' or '0', corresponding to presence or absence of the spectral color respectively (See col. 11, line 62-col. 12, line 31). Since each bit is represented by a particular emitter structure (with associated grating(s)), it would have been a logical and obvious matter to one of ordinary skill in the art not have present a particular emitter structure (and its associated grating(s))

Art Unit: 2872

if that particular bit will always be '0'. Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have the optical identification element and particle and method for reading an encoded optical identification element and encoded particle of Frankel further include the value of each bit corresponding to presence or absence of a corresponding refractive index pitch in the grating, and hence the value of each bit corresponding to the magnitude of refractive index variation of a corresponding refractive index pitch in the grating, such as by permanently removing, or not including, a particular emitter or set of emitters (and their associated grating(s)) for those bits that will always be a particular value, namely '0'. One would have been motivated to do this to reduce the complexity, cost, construction, and size of the resultant optical identification element/particle.

21. Claims 46 and 49 are rejected under 35 U.S.C. 103(a) as being unpatentable over Frankel in view of Nova et al. (WO 96/36436).

Frankel discloses the invention as set forth above in Claims 21 and 47, except for the chemical being synthesized by a split-and-pool technique. However, such a synthesis technique is well known in the art for combinatorial synthesis of chemicals. For example, Nova et al. teaches particles/substrates that may be tagged for identification, wherein the chemicals to be synthesized onto the particles/substrates are made using a split-and-pooling technique (See for example Figures 1-4; 10; 20; Pages 151-152). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have the chemical in the optical identification element and method of Frankel be synthesized by a split-and-pool technique, as taught by Nova et al.,

Art Unit: 2872

to take advantage of the speed and efficiency of the technique for synthesizing a large number of chemical compounds.

22. Claim 53 is rejected under 35 U.S.C. 103(a) as being unpatentable over Frankel.

Frankel discloses the invention as set forth above in Claims 47 and 50, except for the chemical comprising nucleic acid and the components at least including bases G, C, A, and T. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the chemical comprise nucleic acid and the components at least including bases G, C, A, and T, since it has been held to be within ordinary skill of worker in the art to select a known material on the basis of its suitability for the intended use. One would have been motivated to have the chemical comprise nucleic acid and the components at least including bases G, C, A, and T, to expand the number of functional chemical groups available for assaying unknown chemical compounds. *Sinclair & Carroll Co. v. Interchemical Corp.*, 325 U.S. 327, 65 USPQ 297 (1945).

Conclusion

23. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Examiner would like to draw Applicants' attention to U.S. Patent Application Publication US 2003/0129654 A1, to Ravkin et al., of record. It is noted that Ravkin et al. discloses a coded particle system (See in particular Abstract; Figures 13-11, 33-36) similar to that recited in the Applicants' disclosure.

Art Unit: 2872

24. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arnel C. Lavarias whose telephone number is 571-272-2315. The examiner can normally be reached on M-F 8:30 AM - 5 PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Drew Dunn can be reached on 571-272-2312. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
